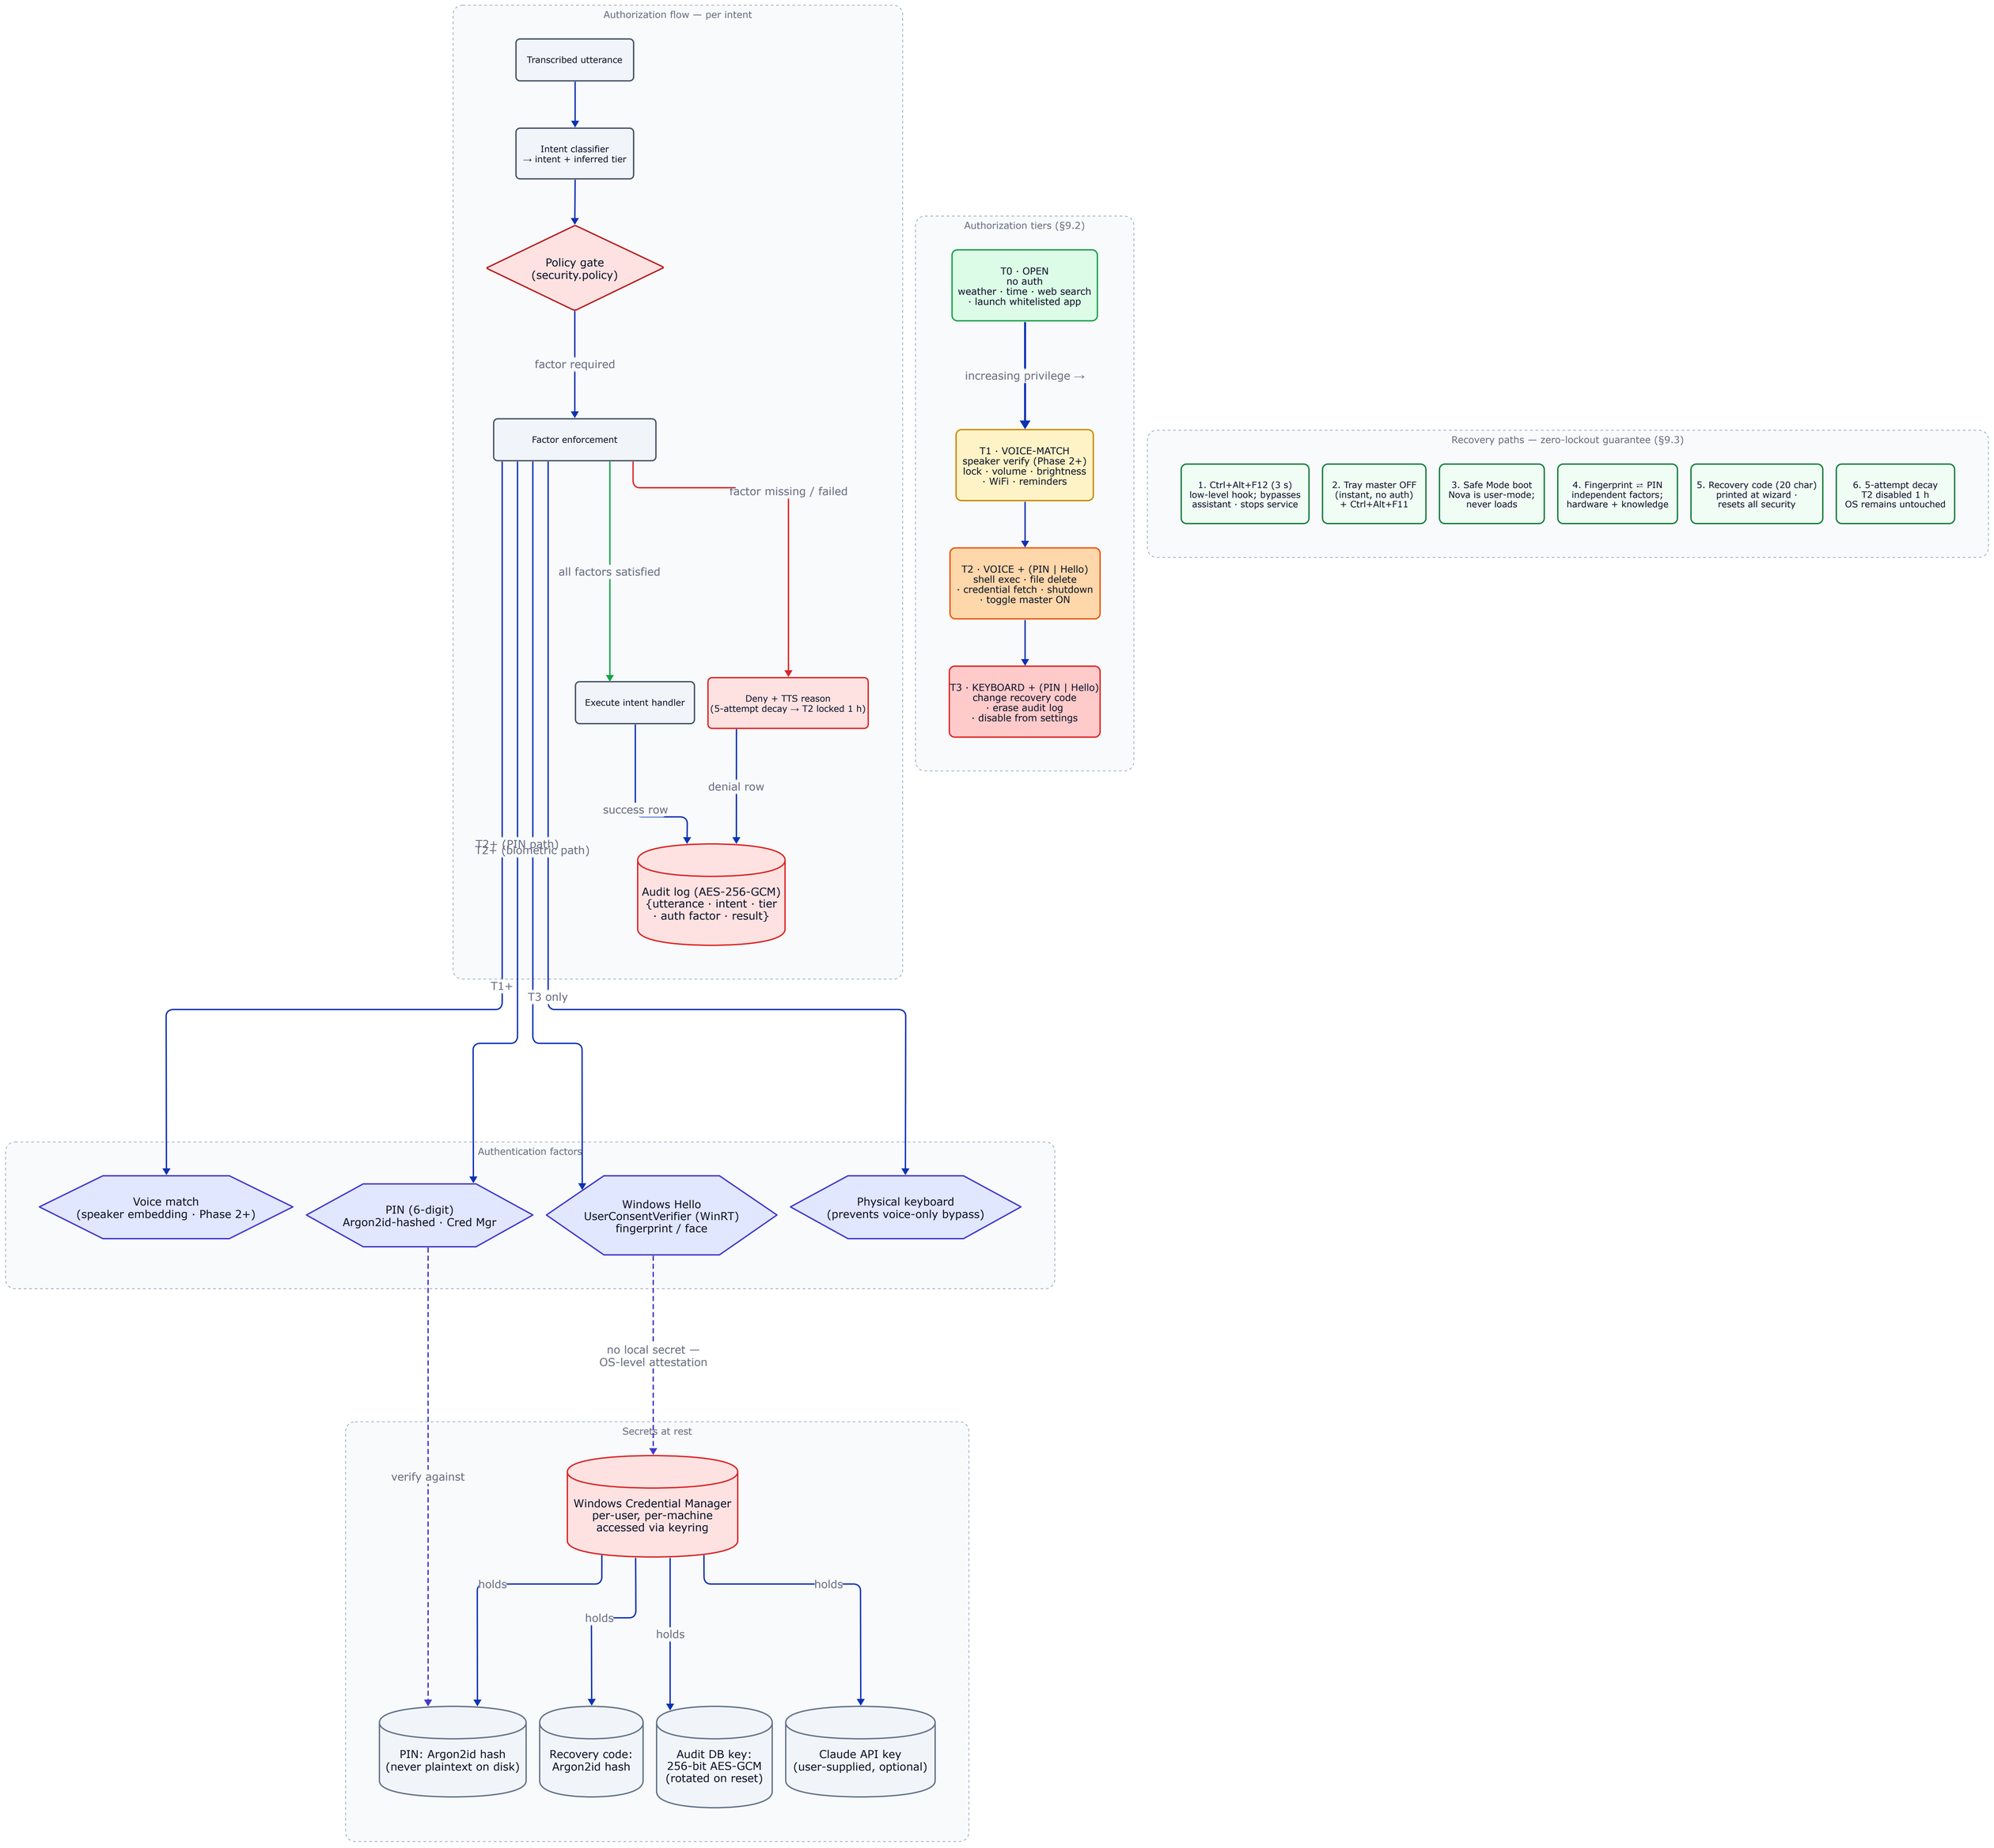
Nova — Security & Authorization

Tiered authorization · layered recovery · zero-lockout guarantee



Master toggle guarantees
- Turning OFF is always instant (no auth) — you can silence Nova mid-call.
- Turning ON requires PIN or Windows Hello (prevents covert re-enable by a bystander).
- When OFF: mic released (LED confirms), wake-word stopped, hotkeys unregistered except Ctrl+Alt+F11 (toggle-on).
- Reminders and low-battery alerts still fire (non-intrusive, no voice).
